

Most IT departments aren't short of email related tasks: maintaining an efficient email service, not overloading the email server, keeping important data secure, finding lost email, having a reliable back up, providing business continuity and disaster recovery for email, managing eDiscovery, recovering email from PST files... Email management can be costly in terms of time and resources.

Cryoserver has a long list of great features built in to improve your business, but the bottom line is: Cryoserver saves you time and money, makes you more compliant and helps you be more productive.

“ Everyone I have spoken to uses Cryoserver and loves it! ”

- Jason Forrest,  
Brook Hill School

“ Cryoserver has always been there for what we need it for and it's just done it. I'd absolutely recommend Cryoserver. ”

- Steve Allen,  
Silchester

“ We never felt like a customer number, we were always properly managed and never felt like they were trying to make a profit at our expense. ”

- David Chatterton,  
South Liverpool Homes

## Cryoserver saves you time & money

- Searches millions of emails in seconds
- Reduces time and cost for eDiscovery investigations
- Makes disaster recovery become almost instant
- Facilitates migration to new mail servers
- Reduces server management costs & storage costs on the mail server
- Eliminates the need to install plugins
- Allows email use even when the mail server is down

## Cryoserver makes you compliant

- Offers your organisation an email black box flight recorder
- Cryoserver emails are tamper evident and admissible in court
- Allows for fast and accurate searches - perfect for eDiscovery
- Fits industry specific legislation, data privacy and human rights regulations
- Helps you implement internal policy access rights
- Makes use of role based access
- Audits privileged user's access

## Cryoserver helps you find your email

- Empowers end users to find their own lost or deleted email using super-fast, super-intuitive search system
- Drops neatly into your mail client (i.e. Microsoft Outlook) for easy access
- Combines searches for more accurate and refined searches
- Replicates your folder system from Outlook within the Cryoserver archive
- Accesses emails on the go using the mobile app, available for IOS, Android, Windows and Blackberry

## Cryoserver can help:

Cryoserver is a focused email archiving tool, providing a tailored solution to businesses across all sectors, matching every customer's individual requirements. We allow real-time capture and storage of every message received by an organisation on a separate, secure server. Encryption and high security along with audited access mean information can't be altered. With a complete focus on email archiving, backed by unmatched expertise, Cryoserver is designed to meet compliance needs, improve productivity and enable users, with fast search & retrieval of information when it's needed most.

**“ We have something like 13 million emails in the system and searches still only take a couple of seconds. ”**  
- Alaric Turner,  
Electrical Contractors Association

### High Return on Investment

By only licensing per ACTIVE user (but retaining a complete archive of every mailbox, both active and inactive), Cryoserver allows a much more cost effective format. Routine maintenance runs up to 50% quicker whilst expensive premium storage costs can be reduced by up to 75%, leading to significant returns on investment for an organisation.

**“ Cryoserver allows us a reliable backup ”**  
- David Chatterton,  
South Liverpool Homes

### Fast and Easy Search & Retrieval

Unlike most systems, Cryoserver doesn't use a database to store email, but stores files by date, making searches much quicker as more concise datasets are searched. An intuitive search interface also helps to make full company searches up to 80% quicker

**“ We've finished all the archiving now and the mail database is down to 270Gb, it started at over 800Gb ”**  
- Ian Martin,  
Federation of Small Businesses

### Never-Delete Archive

Email data in Cryoserver's archive can never be deleted or altered, removing any risk of vital information being lost. The unalterable nature of Cryoserver also creates evidential quality data, admissible in court.

### Eliminate the Need for PST Files

Our archive ingests data from all sources, including PSTs, meaning your organisation no longer has to worry about unreliable storage or searching multiple locations.

**Expertly Simple**  
**Focused, flexible email archiving**
