

Cryoserver works seamlessly with MS Office 365 to enhance the email user email experience. Offering the fastest, simplest and most advanced search functionality on the market today. Cryoserver enables the email user to find any email in seconds, without leaving Outlook.

Cryoserver will:

- Ensure you get the very best out of Office 365 and make your email a valuable business asset
- Provide enriched searching, making Outlook the best place to find any email whenever you need it!

The business case...

Office 365 provides the facility for larger individual mailboxes and increased access via cloud connections. The reality is that as your mailboxes grow, access will be slower than it was before, requiring some enhancement for maximum performance.

What's more...

Office 365 licenses per user, so all employees – past, present and temporary – require a license for their mailbox to remain accessible. Cryoserver only licenses per active user but will still retain the complete archive of anyone who departs, without consuming a license once their mailbox is inactive

How does Cryoserver enhance Office 365 email?

eDiscovery - Cryoserver's sophisticated and fast search is closely monitored and audited. With access only for authorised privileged users, archive information can provide evidential weight for legal and HR issues - when your business needs them most.

Mobile App - Access for mobile users offers high-level security to your organisation by storing no data on the mobile device itself.

Compliance - Cryoserver's tamper-evident archive guarantees information is kept secure removing the risk of email user's modifications.

What happens to your email if you leave Office 365?

There are many email service providers available today and organisations can shop around for best value. However, switching provider can be time-consuming, complex and expensive, which can put many businesses off migrating.

Cryoserver ensures a business has freedom to change service providers. By holding all email sent and received by an organisation, Cryoserver facilitates effortless migration from one Service Provider to another making it the perfect Cloud Enabler for your business.

How will you manage people who leave your organisation?

Cryoserver keeps a copy of every email for as long as the business requires but only licences for live users.

Leavers' emails are retained, no user licence required, guaranteeing cost-effective access to all legacy email. Cryoserver's simple delegated email access function is the perfect solution to deal with leavers' email.

Red Commerce Case Study

Red Commerce are a multi-national SAP solutions provider with high technological standards. We have been able to supply different delivery methods to fit Red's changing needs through the years; using cloud, appliance and software at different times

Luke Braham, IT manager, told us about their move to the cloud and their use of Cryoserver to make this move quickly and securely :

"We were pushing everything to the cloud, it made sense to have email archiving in the cloud too, why have it in house?"

“ What we like about Cryoserver is the ability to search any email, from any time, from any person; in a matter of seconds. **”**

Problem

Cryoserver acts as the perfect partner to Office 365; its email archive specialism allows it to enhance functionality in Office 365 to make for the best email archive the cloud has to offer.

Office 365 required some enhancement in order to meet Red Commerce's high standards.

Solution

"The 365 search feature isn't great, what we liked about Cryoserver is the ability to search any email from any time from any person in a matter of seconds."

Luke had to take his bid for Cryoserver to management:

"Cryoserver makes for quite an easy argument to give the CIO as to why we should use the solution."

“ When users leave we can almost instantly delete their mailbox thus freeing up licences/space. The search engine for Cryoserver is much better than giving delegated mailbox access to search **”**

Problem

Leavers' email becomes hard to find: As people leave an organisation it's important that your business doesn't lose track of their projects and new leads are provided with all the relevant information.

Solution

"Archived mail is one of the primary reasons we use Cryoserver. When users leave we can almost instantly delete their mailbox thus freeing up licences/space."

"The search engine for Cryoserver is much better than giving delegated mailbox access to search."
